DETAILED ACTION

Information Disclosure Statement

The IDSes filed 2/13/04 and 3/16/05 have both been considered and placed of record. The initialed copies are attached herewith.

Specification

The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

The disclosure should be carefully reviewed to ensure that any and all grammatical, idiomatic, and spelling or other minor errors are corrected.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 3-33 are rejected under 35 U.S.C. 102(b) as being anticipated by JP 2-99933 ('33). Reference '33 discloses charging a capacitor 2 to a full charge level (p 6, lines 14-19 and figure 1) comprising, *inter alia*, delivering power to the capacitor (p 11, line 23 to p 12, line 1 and figures 1 & 3), terminating power delivery to the capacitor

Art Unit: 2838

under the claimed condition (p 12, lines 1-10 and figures 1 & 3) and restarting the power delivery after a predetermined time period (p 12, lines 13-18). Measuring the capacitor voltage level to determine whether the capacitor reaches the claimed level can be found on p 12, lines 1-4 and figure 3 of '33. The claimed feature of determining ON time, OFF time and cycling between them is inherent in '33. The oscillation rising circuit 4 has charges, which oscillate back and forth between the primary and secondary windings of transformer 4B and then pump into the capacitor 10. Measuring circuitry that measures the output voltage level can be found in the charge completion detection circuit 7 of '33.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1 and 3-33 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims of U.S. Patent No. 6,636,021. Although the conflicting claims are not identical, they are not patentably

Art Unit: 2838

distinct from each other because it would have been obvious to cycle the on/off time in order to reduce the power dissipation.
